## **DETAILED ACTION**

## **Priority**

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

## Claim Rejections - 35 USC § 103

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yokonuma et al. (US 2007/0252901) in view of Anderson et al. (US 2004/0046868).

As to claim 1, Yokonuma et al. teaches a camera (Figure 3, photography elements "38"; [0040]), comprising a light receiving unit for light (Figure 2, optical communication receiver "15") provided in addition to the camera (Figure 3, photography elements "38" and IRDA

receiver "5"); wherein the light receiving unit receives information from the light ([0039]). Although Yokonuma et al. does not explicitly teach using visible light for communications between the digital cameras, Yokonuma et al. does teach that the invention is applicable to other types of optical communication ([0090]). In view of this, the examiner takes **Official Notice** that using visible light in short-range communication is a well known concept in the art. One of ordinary skill in the art would have been motivated to use visible light in communication, because visible light allows for a speedy, robust way to communicate information. The claim also differs from Yokonuma et al. in that it further requires that the camera be equipped with a cellular terminal.

In the same field of endeavor, Anderson et al. teaches a digital camera having a built-in cellular modem for long range communication ([0025]). In light of the teaching of Anderson et al., it would have been obvious to one of ordinary skill in the art to include the modem in the camera of Yokonuma et al., because this would allow a user to send image data and other information to devices that may not be in the vicinity of the camera (i.e. places that could not be reached using infrared light).

As to claim 2, Yokonuma et al., as modified by Anderson et al., teaches the cellular terminal of Claim 1, wherein the light receiving unit is set so as to point in the same direction as a lens of the camera of the cellular terminal (Figure 2), and communication through visible light is received when a device configured to transmit information through visible light is portrayed in a display of the camera (Figure 12, camera icons "A" – "F"; [0071] and [0072]).

## Conclusion

Application/Control Number: 10/588,009 Page 4

Art Unit: 2622

1. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to ANTHONY J. DANIELS whose telephone number is (571)272-

7362. The examiner can normally be reached on 8:00 A.M. - 5:30 P.M..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Sinh Tran can be reached on (571) 272-7564. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
